**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

# Office Action Summary

**Application No.**

10/509,117

**Applicant(s)**

TAKEGAMI ET AL.

**Examiner**

EMILY I. NALVEN

**Art Unit**

3744

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 09 January 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-5 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-5 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Response to Amendment*

Receipt of amendment filed on Jan. 9, 2008 is acknowledged.

### *Claim Objections*

1. **Claims 1-5 are** objected to because of the following informalities:

**In regard to claim 1**, the recitation "said compressor" (line 6) should be changed to -- said compressors -- to further clarify the language of the claim.

**In regard to claims 2-5**, they are objected to for being dependent on an objected claim.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 1-4** are rejected under 35 U.S.C. 102(a) as being unpatentable over Tanimoto et al. (US Patent No. 6,698,217 B2) in view of Shaw (US Patent No. 4,497,185).

**In regard to claim 1**, Tanimoto et al. teach a refrigerating apparatus (1) in which a refrigerant circuit which performs a vapor compression refrigerating cycle (col 8 lines 25-29) is provided with an oil return passageway (31) through which refrigerating machine oil separated on the discharge side of the compressors

(2A) is injected into the suction side of said compressors (2B, 2C) (see Fig. 1 and col 10 lines 64-657 and col 11 line 1) comprising a liquid injection passageway (10, 27) (see Fig. 1 and col 10 lines 54-55) through which liquid refrigerant is injected into the suction side of said compressors (2A, 2B) (see Fig. 1 and col 9 lines 26-28), wherein said oil return passageway (31) is connected to said liquid injection passageway (27) (see Fig. 1) in which gas refrigerant in said oil return passageway (31) is mixed with said liquid refrigerant prior to injecting into the suction side of said compressors (2A).

However, Tanimoto et al. do not explicitly teach the oil return passageway is connected directly to the liquid injection passageway. Shaw teach a compressor (12) with an oil return passageway (line 68, 68a) that is directly connected to a refrigerant injection passageway (from nozzle 70) in which the oil is mixed with refrigerant (in passage 48 and port 22) before entering the compressor (see Fig. 1). It would have been obvious to one of ordinary skill in the art at the time of the invention to mix the refrigerant and oil before entering the compressor to ensure that the compressor stays well lubricated during the entire period the refrigerant is being compressed and to improve the efficiency of the compressor.

**In regard to claim 2**, Tanimoto et al. teach a refrigerating apparatus (1) in which a refrigerant circuit which performs a vapor compression refrigerating cycle (col 8 lines 25-29) is provided with a gas injection passageway (15) through which gas refrigerant is injected into the suction side of the compressors (2A, 2B) (see Fig.

1 and col 9 lines 26-30) comprising a liquid injection passageway (10, 27) (see Fig. 1 and col 10 lines 54-55) through which liquid refrigerant is injected into the suction side of said compressors (2A, 2B), wherein said gas injection passageway (15) is connected to said liquid injection passageway (10, 27) (see Fig. 1) in which gas refrigerant in said oil return passageway (31) is mixed with said liquid refrigerant prior to injecting into the suction side of said compressors (2A).

However, Tanimoto et al. do not explicitly teach the gas injection passageway is connected directly to the liquid injection passageway. Shaw teach a compressor (12) with an liquid return passageway (line 68, 68a) that is directly connected to a gas/liquid injection passageway (from nozzle 70) in which the oil is mixed with refrigerant (in passage 48 and port 22) before entering the compressor (see Fig. 1). It would have been obvious to one of ordinary skill in the art at the time of the invention to mix the refrigerant and liquid oil before entering the compressor to ensure that the compressor stays well lubricated during the entire period the refrigerant is being compressed and to improve the efficiency of the compressor.

**In regard to claim 3,** Tanimoto et al. teach the refrigerating apparatus (1) comprising a heat source side unit (4) and utilization side (41, 45, 51) units being connected with one another (see Fig. 1) wherein the degree of superheat of suction refrigerant of said compressors (2A, 2B, 2C) is controlled by adjusting the rate of flow of refrigerant flowing through said liquid injection passageway (10,

27) without operating expansion mechanisms provided in said utilization units (4) (see Fig. 1 and col 10 lines 43-53).

**In regard to claim 4**, Tanimoto et al. teach the refrigerating apparatus (1) wherein said compressors (2B, 2C) are variable displacement compressors (col 8 lines 48-52) wherein said liquid injection passageway (10, 27) is opened whenever the operating capacity of said compressors (2B, 2C) exceeds a predetermined value (col 13 lines 48-52).

4. **Claim 5** is rejected under 35 U.S.C. 103(a) as being unpatentable over Tanimoto et al. (US Patent No. 6,698,217 B2) in view of Shaw (US Patent No. 4,497,185) in view of Tanimoto et al. (US Patent Pub No. 2004/0112082).

**In regard to claim 5**, Tanimoto et al. ('217), as modified by Shaw teach wherein at least one of said compressors (2B, 2C) is deactivated until the operating capacity of said compressors (2B, 2C) but don't explicitly teach until it exceeds a predetermined value (col 1 lines 33-36 and col 1 line 67 and col 2 lines 1-23). Tanimoto et al. ('082) explicitly teach deactivating a compressor if the capacity becomes to low (para 17 and para 18). It would have been obvious to one of ordinary skill in the art at the time of the invention to deactivate the compressor until it exceeds a predetermined value as taught by Tanimoto et al. ('082) in the system as taught by Tanimoto et al. ('217), as modified by Shaw, because the efficiency of the system is improved and prevents any wear on the system should a compressor be operating at too low a capacity.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection. The Applicant has amended the claims to state that oil return passageway is connected directly to the liquid injection passageway, thus overcoming the prior art of rejection.

***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Emily Iris Nalven whose telephone number is 571-272-

Art Unit: 3744

3045. The examiner can normally be reached on Monday - Thursday 8 AM - 5:30 PM and on alternate Fridays 8 AM – 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisors, Cheryl J. Tyler can be reached on 571-272-4834 or Frantz Jules can be reached on 571-272-6681. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
